

Exchange Mailbox to EML Converter

Installation and Configuration

(‘Per User Installation’ and ‘Per Machine Installation’)

With this guide, you would be able to quickly install and easily configure Exchange Mailbox to EML Converter in your system, and effortlessly generate EML files from emails of your Exchange Email accounts.

For 'Per User Installation' *(ideal for standalone single user/workstation)*

ExchangeMailboxToEmlSetup.zip

For 'Per Machine Installation' *(ideal for installing on Citrix and Terminal Servers)*

ExchangeMailboxToEmlSetup-Citrix.zip

Extract these file contents to a folder.

NOTE: ‘Per User Installation’ and ‘Per Machine Installation’

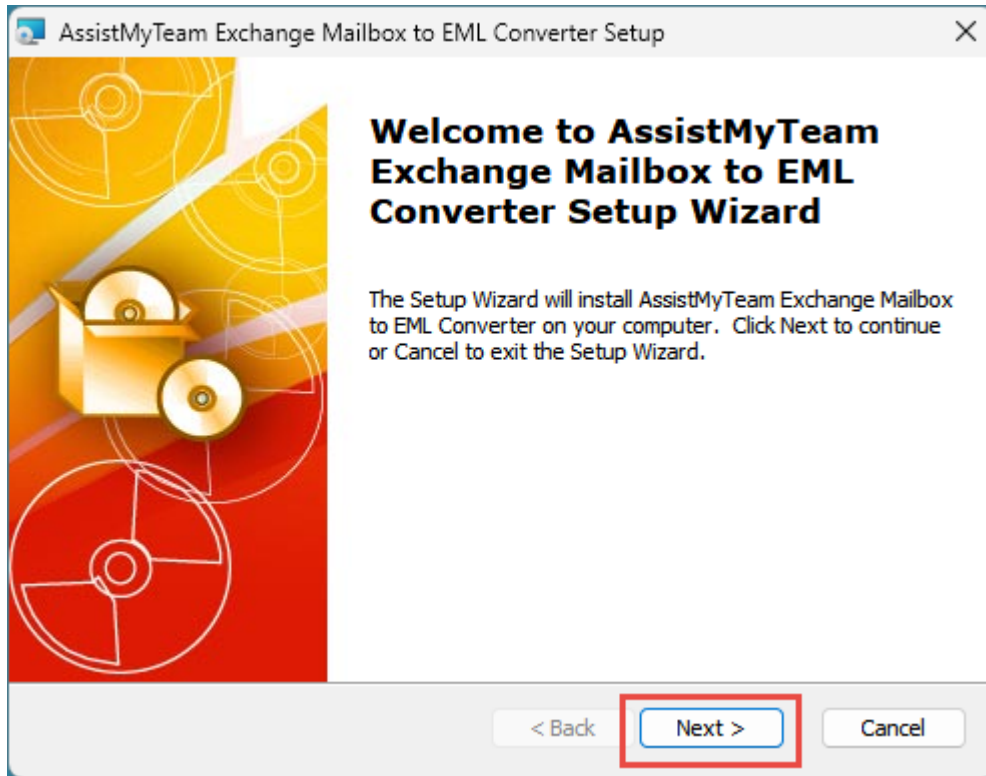

In ‘Per User Installation’, the install is performed 100% on the local system and nothing is installed on your Exchange or Windows Server. Further, this install is intended to serve only the current logged on user of the system/workstation and will be installed under the user's application data folder (instead of Programs Files folder) and no elevated permission is required. So, there won't be a prompt from UAC to allow this install unless you change the install directory to say, Programs Files which will warrant an elevated permission/UAC prompt. If the same system is used by multiple users, each one needs to install the app on their profile with the default installation folder location.

‘Per Machine Installation’: If you have the need to have a single install that serves all users of the system (i.e., the files will be installed under Program files folder), download the Citrix/Terminal Server version of the setups to perform a per machine installation.

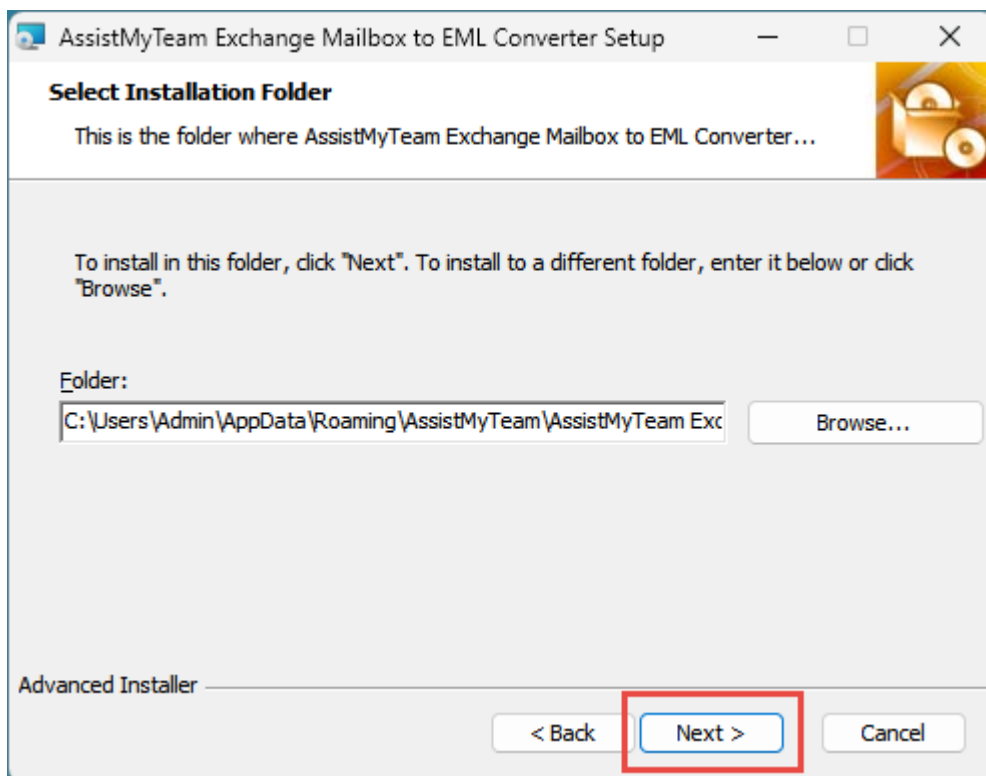

Requirements:

- Microsoft .NET framework 4.8
- Windows 11, Windows 10, Windows 8.1, Windows 8, Windows 7, Windows Vista (both 32bit and 64bit are supported) and all server-based Windows 2012 and above.

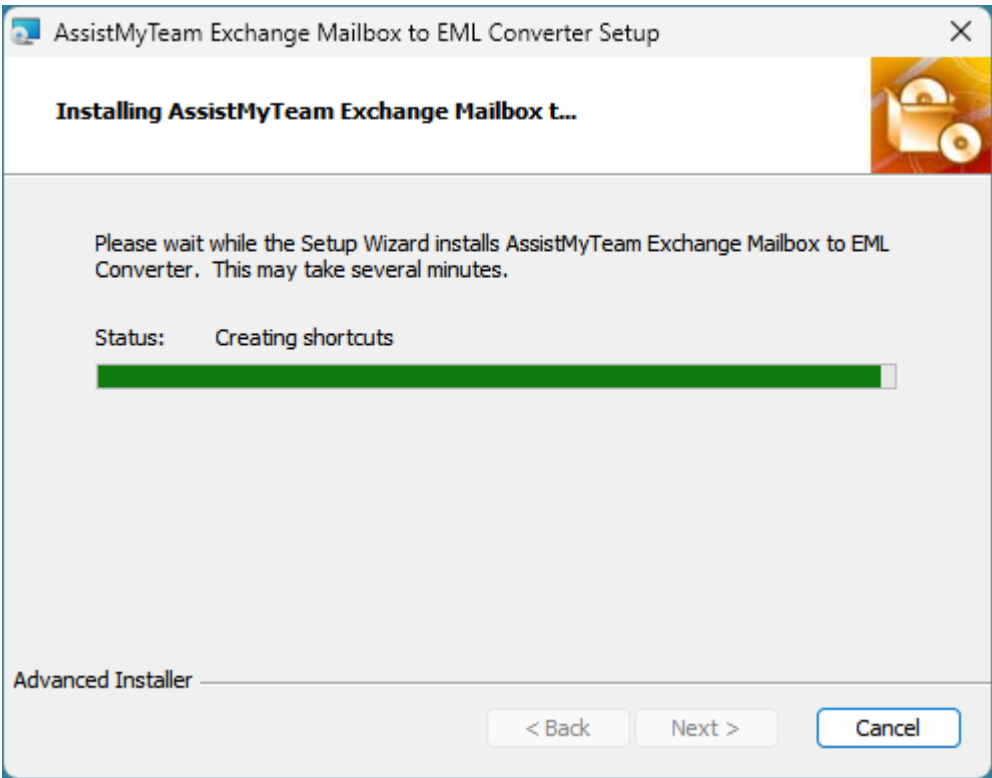

Step 1. Run the **ExchangeMailboxToEmlSetup.exe** to start the installation. Click '**Next**' to Continue.

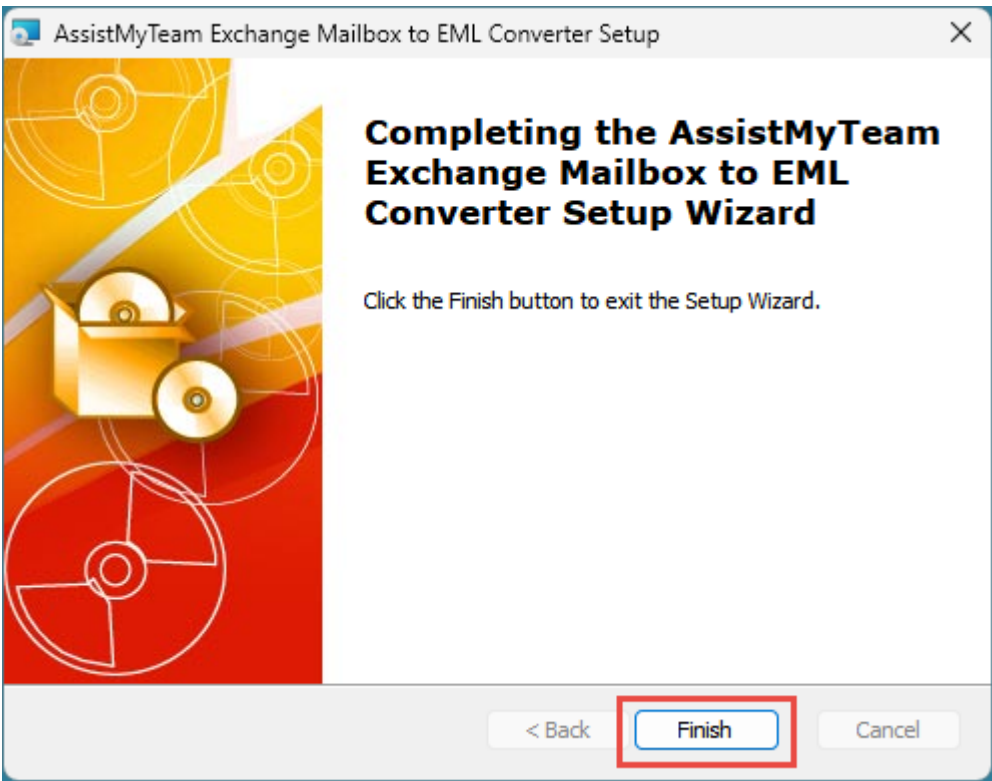

Step 2. Select the appropriate destination folder where the application files will be installed. If you change the default folder path, please make sure you have appropriate permission.

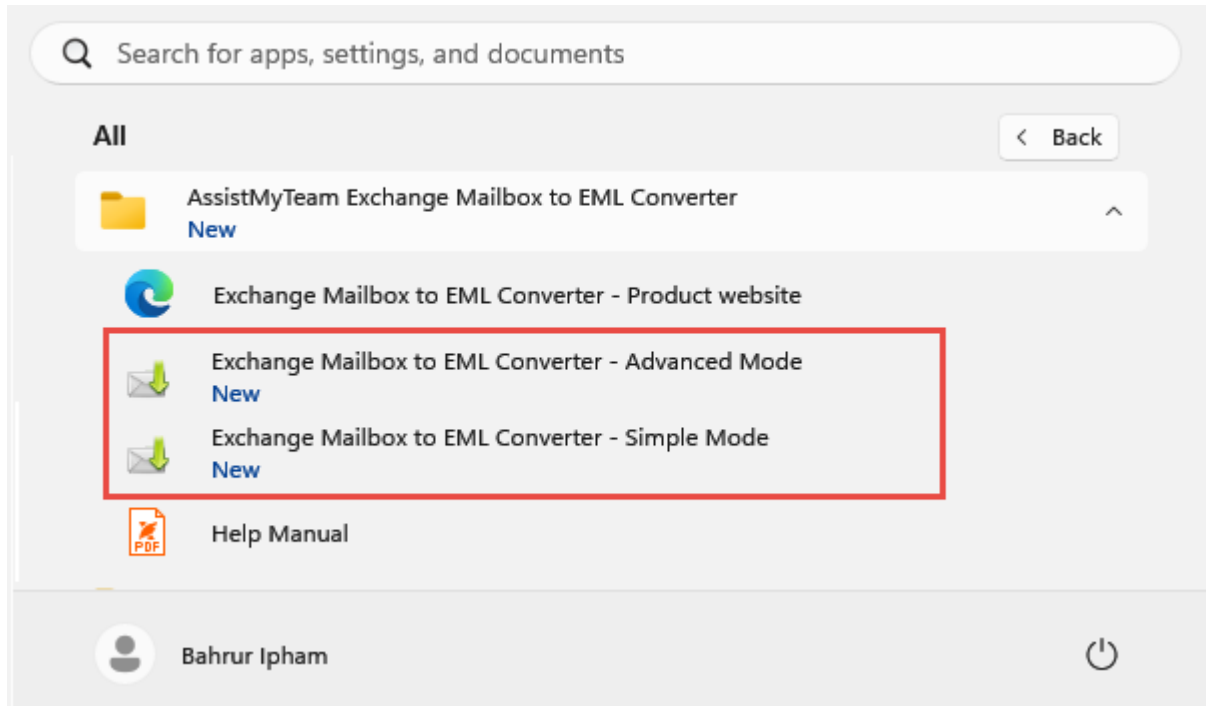

Step 3. Click '**Next**' to continue with the files extraction. It just takes a few minutes to complete the whole copying process.

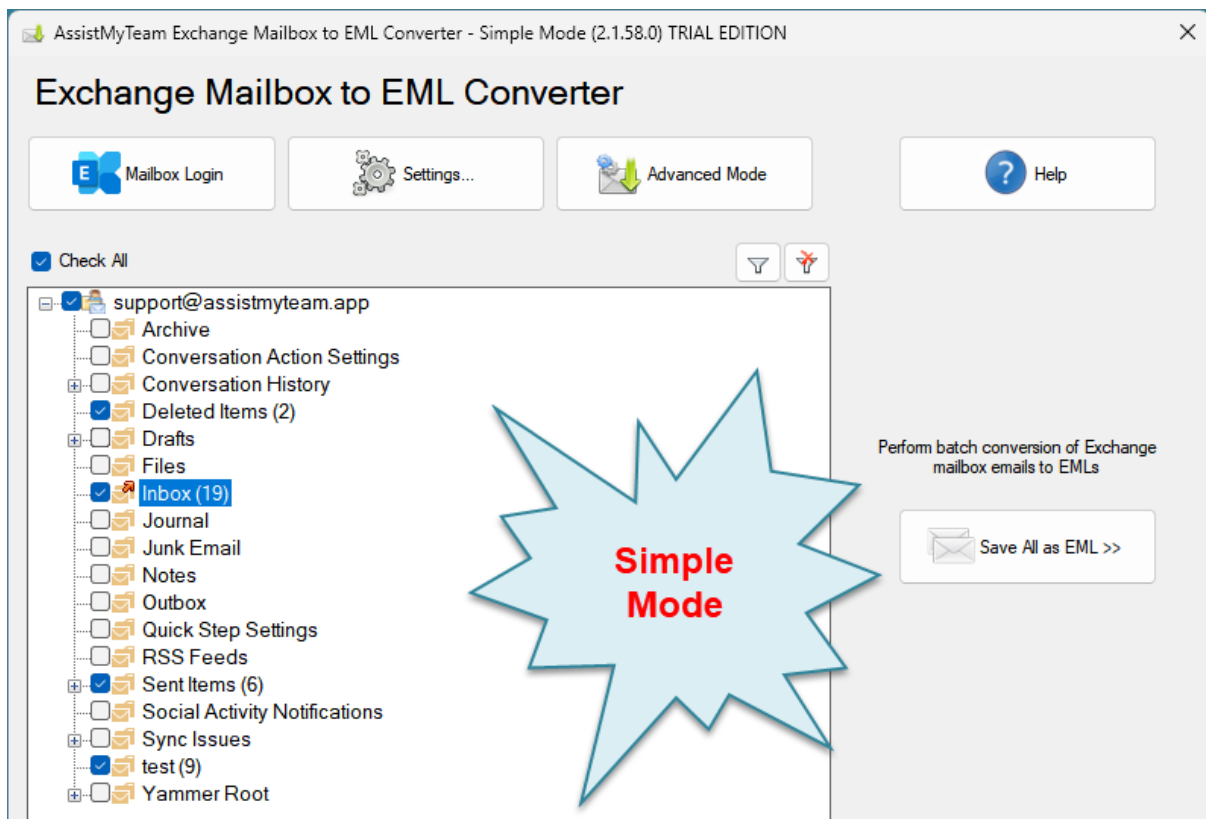

Step 4. Click '**Finish**'. This ends the files installation process in your system.

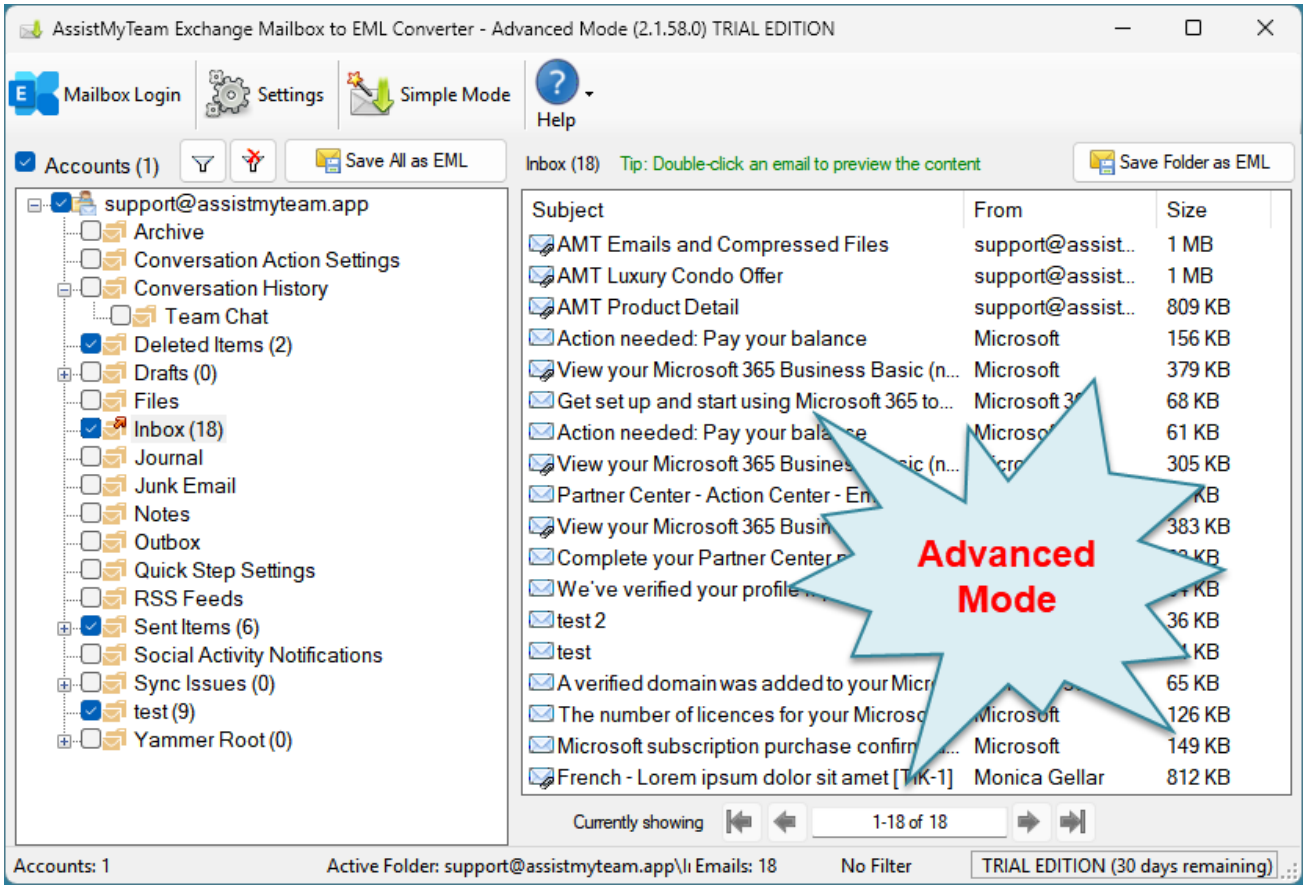

Now go to **Start Menu > All Apps**. If the installation was successful, you will see new menu entries '**Exchange Mailbox to EML Converter – Simple Mode**' and '**Exchange Mailbox to EML Converter – Advanced Mode**'.

To run the app in default, basic mode, click '**Exchange Mailbox to EML Converter – Simple Mode**' from the menu under 'All Apps'. This will load and display the main interface of the converter app.

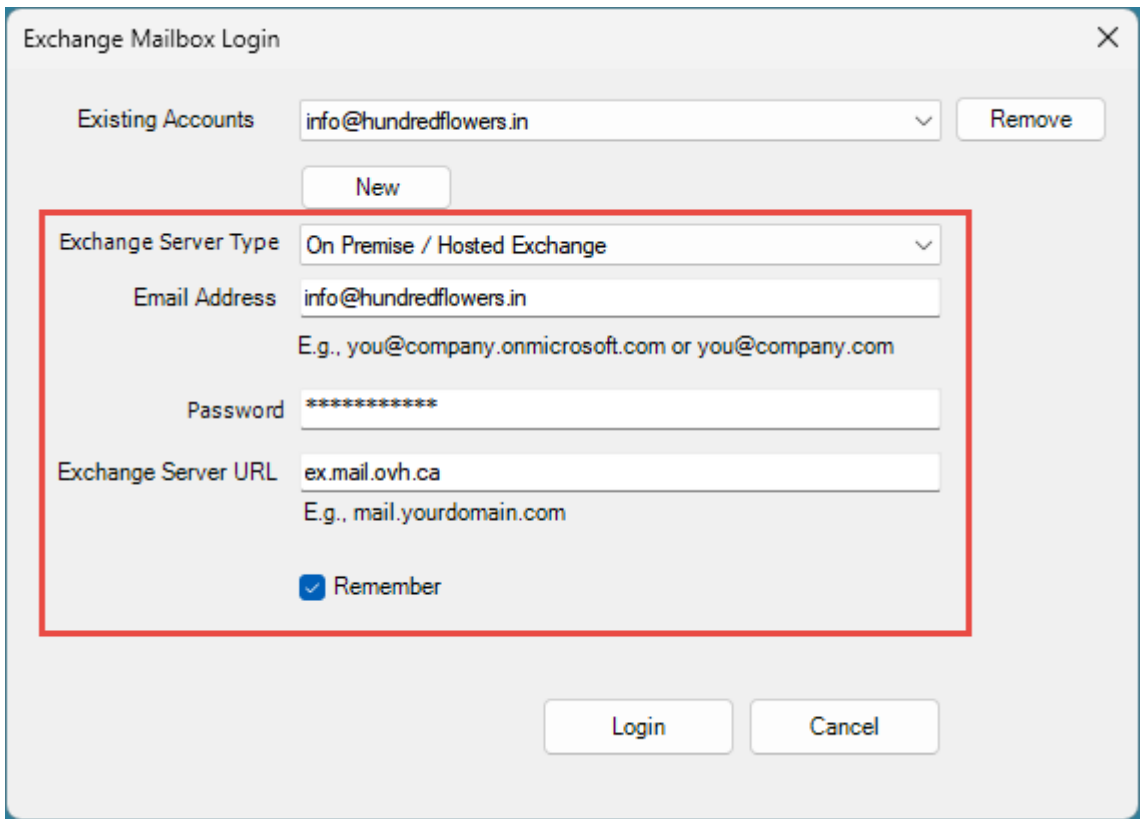

To run the app in advanced mode with full control, click '**Exchange Mailbox to EML Converter – Advanced Mode**' from the menu under 'All Apps'.

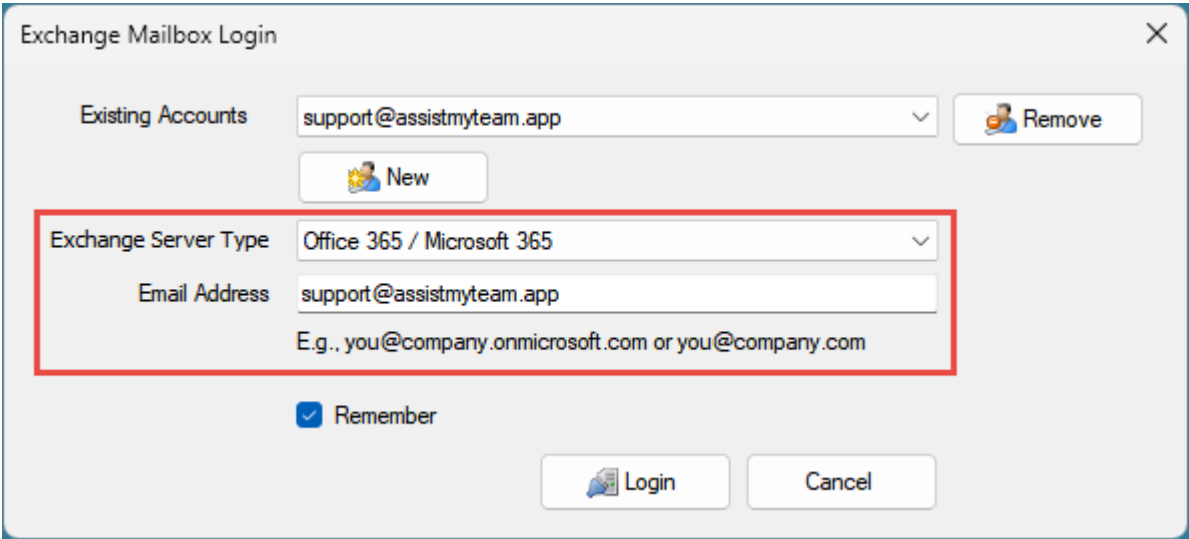

There are two types of Exchange Server connectivity supported.

- 1) **On-premise Exchange or Hosted Exchange** – Before connecting the AssistMyTeam EML Converter app to your on-premise or hosted Exchange account for the first time, you will need to specify the email address, password and the Exchange Server URL (where the Exchange server is hosted).

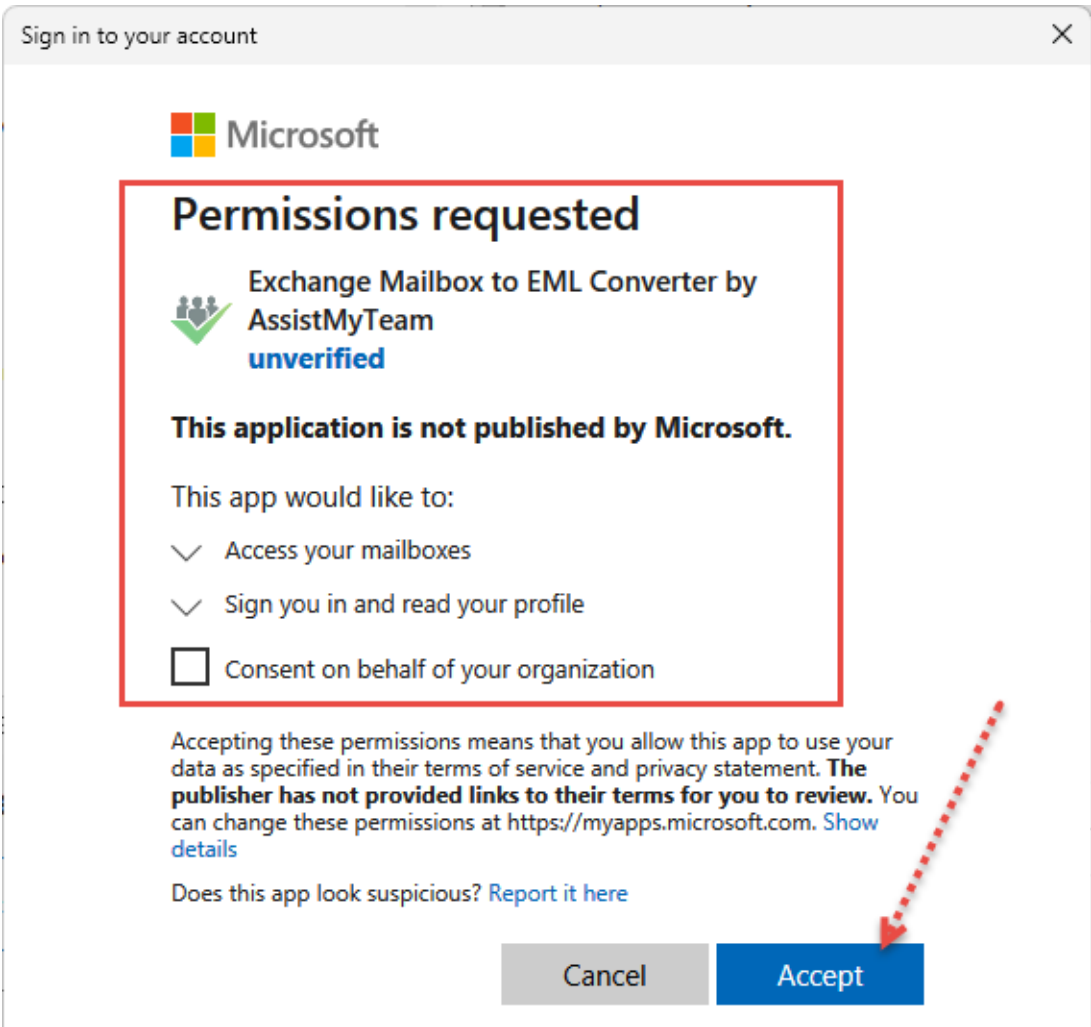

- 2) **Microsoft 365 (Office 365) Exchange Online** - Before connecting the AssistMyTeam EML Converter app to your Microsoft 365/Office 365 Exchange Online account for the first time, you will need to specify the email address.

The 'Exchange Mailbox Login' dialog box shows the 'Existing Accounts' section with a dropdown menu set to 'support@assistmyteam.app' and a 'Remove' button. Below this is a 'New' button. The 'Exchange Server Type' dropdown is set to 'Office 365 / Microsoft 365'. The 'Email Address' field contains 'support@assistmyteam.app' with a hint 'E.g., you@company.onmicrosoft.com or you@company.com'. A 'Remember' checkbox is checked. At the bottom are 'Login' and 'Cancel' buttons.

When you try to connect the AssistMyTeam EML Converter app to your Microsoft 365/Office 365 Exchange Online account for the first time, you will be prompted to grant permissions to the app to access your mailbox. To allow the AssistMyTeam app to convert your emails to EML, click ‘**Accept**’ button from the prompt.

The 'Sign in to your account' dialog box displays the Microsoft logo and a 'Permissions requested' section. This section includes a green checkmark icon, the text 'Exchange Mailbox to EML Converter by AssistMyTeam unverified', and a warning: 'This application is not published by Microsoft.' Below this, it lists permissions: 'Access your mailboxes' and 'Sign you in and read your profile', both with checkmarks. There is an unchecked checkbox for 'Consent on behalf of your organization'. A red dashed arrow points to the 'Accept' button at the bottom right. The dialog also contains a disclaimer about data usage and a link to 'Show details'.

Subsequent access to your Microsoft 365/Office 365 Exchange account will remember your choice and permission.

To configure the output settings for EML from emails and attachments, click the ‘Settings’ button. Within the settings dialog, you will find options to tweak and customize the default file naming scheme.
